

The Science Behind the Magic

Vingunguti Secondary School

Amina Jumaine Kigeso and Rachel James Mshanga

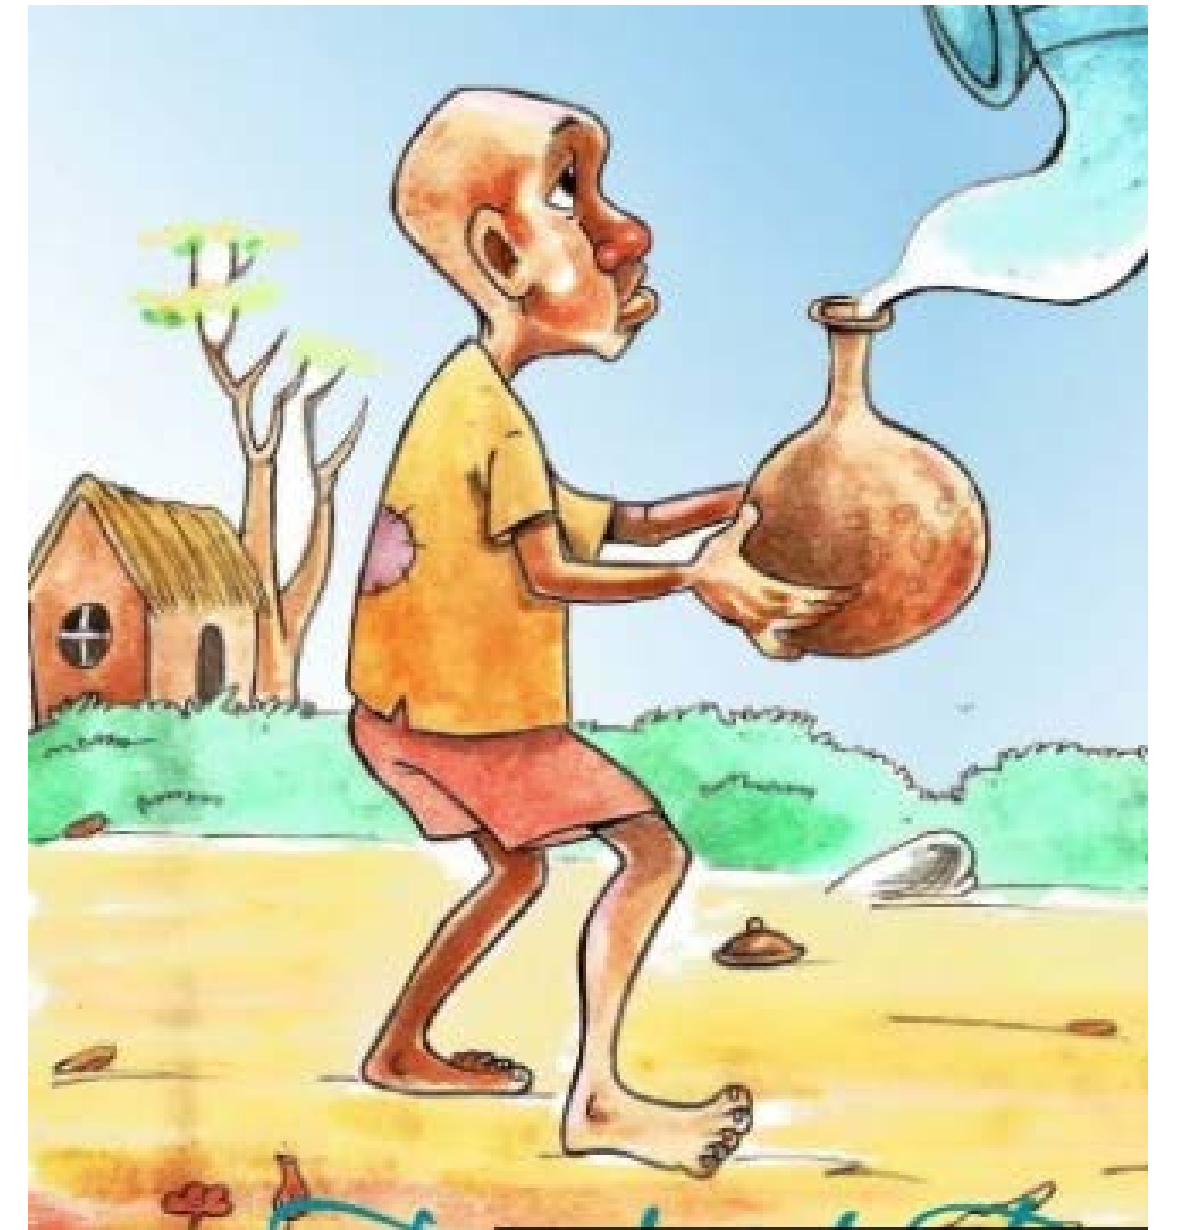

Abstract:

It seems that, the magician performs the magic activity which is extra ordinary but our research showed that all action are scientifically performed. The magician uses the sense that most of people do not know that science exist. Most of people think that magic things are impossible but in real sense magic things follow scientific procedure.

Method: Key Questions

The objective of our project is to investigate the scientific procedure of magic actions and help people who are still bribed by magician like those who think that magician can convert paper to money or can duplicate the little money to million's.

The methods used is experimental, we start by learning the trick which a magician uses to bribe people. We used experimental methods because we wanted to know each step a magician perform. Through this we can explains any action which a magician perform scientifically

Results:

Most of magical action is scientifically proved. Most of people do not understand that natural science exist. The magician follows the principle of physics, chemistry and biology and they learn very carefully the psychological mind of the viewer. They scare people and finally bribe them.

Conclusions:

People are required to learn this natural science so as to be aware with the magician. Also they have to understand that wealth come by hardworking and not by superstition way. Magician cannot duplicate the little money you have. Magician stills your little money in modern way!

Acknowledgments:

We acknowledge Mr. SUTTA B our coordinator teacher, Mr. N Nestory our headmaster, Vingungutis,s.s. teachers and our Parents for their support to complete our project.
