

Pregnancy Cases for Girls in Boarding And Girls School

Mbinga Girls Secondary School

Avitha Nicholas Ndunguru and Mary Denis Kapinga

Introduction

Pregnancy for girls hinders them to proceed with their study as a school student, this is the problem face girl students when they became maturity or when they riches adolescence.

The main aim of this project is to analyze the number of students got pregnancy in school time, between girls in boarding school and day schools, also this projects I explains the causes of that makes girls to get pregnancies during studies.

Method

This projects was conducted by interview method of data collection, we decided to use this method because of limit of time for conduction of this project and environment for conduction of this project.

During conduction of the project we used the following materials, papers, pens, pencils and money for transport allowance. we interviewed few students and teachers from four schools such as kiamili secondary, kampala secondary, mkako secondary and mbinga girls secondary schools.

Results

We succeeded to visit all four schools for collection of data on pregnancy cases for girls. The data were tabulated in the table below,

SCHOOLS	DAY STUTUDENTS					SCHOOLS	BOARDING STUDENTS				
	YEAR	FORM ONE	FORM TWO	FORM THREE	FORM FOUR		YEAR	FORM ONE	FORM TWO	FORM THREE	FORM FOUR
KIAMILI SECONDARY SCHOOL	2018	-	3	-	1	KIAMILI SECONDARY SCHOOL	2018	-	-	1	-
	2019	-	-	1	-		2019	-	-	-	-
	2020	-	2	3	1		2020	-	-	2	1
KAMPALA JUNIOR SECONDARY SCHOOL	2018					KAMPALA SECONDARY SCHOOL	2018	-	-	-	-
	2019						2019	-	1	1	1
	2020						2020	-	1	-	1
MKAKO SECONDARY SCHOOL	2018	-	1	1	1	MKAKO SECONDARY SCHOOL	2018				
	2019	1	1	1	1		2019				
	2020	-	3	1	3		2020				
	2018					MBINGA GIRLS SECONDARY SCHOOL	2018	1	-	-	-
	2019						2019	1	-	-	-
	2020						2020	1	-	-	2

From the table above , the data shows us that

In 2018

at kiamili secondary school, some of students are staying in hostel and some comes from their homes and coming there for study and goes back home(these are day students).in this year five(5) students got pregnancy among those students four students were day students and one students was from those in hostel.

At Kampala junior secondary school, all students are stay in at school this is boarding school. In 2018 there was no student who got pregnancy.

At mkako secondary school there were three students got pregnancy, all students got pregnancy were day students.

At Mbinga girls there was only one pregnancy in this year which was from form one, this student found to have pregnancy soon as she was admitted at school .this means she got a pregnancy when she was still at home.

In 2019

At kiamili here was one student got a pregnancy, student from form three and was a day scholar.

At kampala junior secondary school there were three students got pregnancy ,one from form two one from form two and one from form four.

At mkako secondary school there were four students got pregnancies, one per each class.

At mbinga girls secondary school there was one student from form one got pregnancy.

In 2020

At kiamili secondary school there were nine students got pregnancy, among these students six students were day scholars and three were from those who are in hostel. This was identified soon after corona break time.

At kampala junior secondary school there were two students who got pregnancy, one from form two and the other from form four.

At mkako secondary school there were seven students got pregnancies, three students from form form two, one students from three, and here students from form four. These pregnancies were identified soon after the corona break time.

At mbinga girl's secondary school there were three students got pregnancies, one of these from form one and two from form four. These pregnancies were identified after corona break time.

Therefore according to teachers from these schools hey said that for those students who are in boarding school ,they got pregnancies during the holidays when they were at home ,pregnancy are identified when they arrive at school from home .

The number of pregnancies seems to be many in 2020 because of long corona leave.

Conclusions

From the projects shows that many pregnancies are from students who are day scholars ,this is because when students makes to and fro moves from home to school there are various factors which faces a girl student ,like hungry, tired they can engage into bad habits like alcoholism and prostitution and other agitation which can lead them into getting pregnancies.

This may be the advice to parents, for a girl student it is better to stay in hostel and boarding school than coming from home to school. This will help girls to study without any problem especially.

Acknowledgments

We thanks our teachers for assistance which they gave to us,

We thank our parents for the blessings the gave to us on doing his projects, and lastly we thanks the head of the school for allowing us to perform this project.
